SBT Update

Announcing the SBT Ultimate Thin Client

SBT Accounting Systems recently announced that all SBT accounting software products are now 100% accessible via the web. This move means that SBT has made it possible for the company controller traveling on business, or vacationing in Fiji, access to corporate accounting information from a notebook computer or hand-held device.

Now all SBT end users can log on to their accounting system via Internet connection at any time, from any location. All that's required is the proper server components and configuration. This is the Ultimate Thin Client solution, since the client is nothing more than a web browser such as Microsoft Internet Explorer 5, accessing a Windows 2000 server.

"Here it is - take it!"

SBT officials confirmed that their new web-based offering is a radically different access paradigm from other mid-market accounting vendors.

Other accounting software vendors have offered or promised web access to accounting data by building new products and requiring users to update their software, costing time and money. However, SBT's Ultimate Thin Client model requires no new upgrade. With the right server configuration, existing users get unlimited web access to all SBT accounting products right away. This puts SBT far ahead of the half-matured transition products offered by competitors.

"All of the top vendors in our industry have been standing at a technological Maginot Line for more than six months now," said William Mills, president and chief operating officer at SBT Accounting Systems. "SBT is the first to step over the line, confirm that this new technology is solid and deliverable, and say 'Here it is - take it!'"

For the first time: ASP hits the mid-market

SBT's Ultimate Thin Client paradigm makes application hosting possible at the local level. As an authorized SBT reseller, **Dominance Software Development** can load SBT software onto our server in house, and host your company in-house.

A big leap past client-server

"SBT's Ultimate Thin Client is a technology leapfrog - SBT has made client-server technology obsolete in the mid-market by taking our products directly to the web," said Lane Giles, senior vice president of development at SBT. "The bottom-line issue here is allowing end-users access to the latest technology. This is SBT's acknowledgement of the present and future power of the web to transform the business environment. Our users get the multi-site advantages of client-server without the big MIS footprint and budget."

How to learn more

We are **Dominance Software Development,** and we've been providing satisfied customers with SBT solutions for over 10 years. If you'd like more about SBT's Ultimate Thin Client and how you can access your SBT data online, please contact us at 937/254-7638.

SBT Accounting Systems Delivers Newest Release of Award-Winning Pro Series

Pro Series 6.0 brings enhanced drill-down and e-business functionality to the mid-market

SBT Accounting Systems recently released SBT Pro Series 6.0, a fully integrated suite of Microsoft-based accounting, business management and e-business applications. SBT Pro Series 6.0 is ideal for medium-size companies that demand real-time inventory control, tightly integrated e-business capability, and source code modifiability.

The SBT PowerDrill Solution

SBT Pro Series 6.0 features the new SBT PowerDrill, which allows for robust user-definable relational data views. Pro Series 6.0 users can drill down on key fields into transaction details within multiple windows. SBT PowerDrill gives companies a competitive edge via fast information gathering and processing in a real-time environment.

Key Enhancements to SBT Pro Series

New Customization Manager module - allows users to make changes to the screens and preserve changes when future builds are installed. With SBT's Customization Manager, Pro Series 6.0 users can: create custom screen forms as subclasses of existing forms; make custom screens available to specific users/companies; and retain customizations when updates are installed.

First Phase Multiple Document Interface - end users can bring up multiple maintenance screens such as Customer and Item Maintenance, along with Vendor Maintenance screens within the same company and module - this is phase one in the development of full MDI in Pro Series.

Enhanced e-business capability - SBT Pro Series 6.0 provides MAPI email and Internet Explorer accessibility. Pro Series 6.0 ships with an imbedded SBT ProAlert module, an Internet "business robot" that works in conjunction with SBT WebTrader to provide an e-business solution to mid-market companies.

SBT Message Master -- allows SBT Pro Series users to simultaneously email, fax and print the same report. Users can email and/or fax a report to an unlimited number of recipients simultaneously, and binary files such as spreadsheets and word processing documents can be attached to emails.

"SBT Pro Series 6.0 is a richly enhanced version of SBT's #1 rated financial software solution for the middle market," said William H. Mills, president and COO at SBT Accounting Systems. "Pro Series has consistently provided top-shelf performance for companies that demand strong real-time inventory control, reliable back office accounting, advanced business-to-business e-commerce functionality, state-of-the-art data drilldown capability, and full modifiability via source code. Pro Series 6.0 takes each of these strengths one step further. The result is an unusually robust financial management and e-business solution that continues to push the envelope of mid-market expectations."

How to Order Pro Series 6.0

If you'd like to learn more about Pro Series 6.0, please contact us at 937/254-7638.

SBT Update Tech Tip for Pro Series 6.0

The Power Drill browser technology that's new with Pro Series 6.0 brings greater reporting power and flexibility with it. If security is an issue, here's a helpful tip to keep in mind. When you are setting up a PowerDrill browser don't forget to make sure that the "Allow user(s) to view any additional columns" box is NOT checked. That way you will maintain security over what data you are allowing people to see.

If you check the "Allow user(s) to view any additional columns" box, this feature can allow Operator-type users to expand their PowerDrill browses to include fields other than you had originally set up.
